

TRIO™ and WATCHMAN™ Reliability Programs

The recently introduced TRIO™ models CX7 and CA-6, offer a new level of efficiency and capability to the predictive maintenance market. With this in mind the WATCHMAN™ Reliability Services teams are now using TRIO for its new customers and will be transitioning existing customers from their legacy CSI and DLI data collectors to the new platform. How could TRIO be so much better, you ask?

TRIO's new configuration was established by the highly experienced field of PdM users. New ergonomics allow more efficient and safer use of the data collector around a plant's machinery. Dangerous and difficult to access machine test locations can be tested from a secure distance using the integral Bluetooth® system design. Voice controlled machine navigation and testing allows hand-free operation when necessary.

WATCHMAN users prefer using the TRIO systems. They have found that route-based data collection is easier and more productive. TRIO offers several ergonomic-designed, in-field carrying options, including the convenient utility belt, shoulder-worn soft case and the shoulder strap/belt configurations.

Whether a predictive maintenance program is implemented in-house or outsourced WATCHMAN services, TRIO can be fully integrated with the WATCHMAN Reliability Portal™ allowing complete outsourced software and services solutions.

WATCHMAN Reliability Services

WATCHMAN™ Reliability Services offer a unique partnership with Azima DLI's staff of expert machine analysts. Savings are realized through shared responsibility where machine vibration data is collected by your staff and is remotely analyzed by Azima DLI experts. Analysis results and alerts are posted on the WATCHMAN Reliability Portal™, our safe and secure web interface that includes a comprehensive dashboard view of information about your equipment condition and facility's monitoring program.

WATCHMAN Reliability Portal

The WATCHMAN Reliability Portal provides secure access to all of your essential equipment condition information over the web. This interactive interface features an innovative dashboard that includes a watch list of high-risk machines and access to analyst reports and repair recommendations. It also serves as a portal for your plant personnel to upload collected data.

'Cloud-based' ExpertALERT™

Our hosted ExpertALERT system is available to our customers as either part of our WATCHMAN services or as a 'cloud-based' software solution for your internal plant or enterprise-wide condition monitoring program:

- 24/7 access to your company-branded portal
- 24/7 access to ExpertALERT Enterprise for your analysts, via Terminal Services to the Azima DLI data center
- IT systems engineers are onsite at the data center, ensuring high availability of portal system
- Daily database backups
- Rental options are available for portable data collectors and online systems
- Azima DLI condition monitoring experts can be quickly commissioned should you require a second-opinion of a machine assessment
